

Turn Assist

Actively monitors a vehicle's blind spot during right-hand turns

Continental's Turn Assist makes right-hand turns safer and easier and reduces driver stress. Warning the driver with audible and visual alerts, Turn Assist detects when pedestrians, cyclists, and other vulnerable road users are detected inside the vehicle's danger zone. This innovative, radar-based system also delivers reliable detection in bad weather and under poor lighting conditions. It can be retrofitted on all types of trucks, buses, and RVs, including older vehicles, and can also be connected to other vehicle warning systems.

Benefits & Features

- › Radar based solution
- › Actively alerts driver to a person in their blind spot
- › Reduce traffic collisions with Vulnerable Road Users at intersections

Technical Specifications

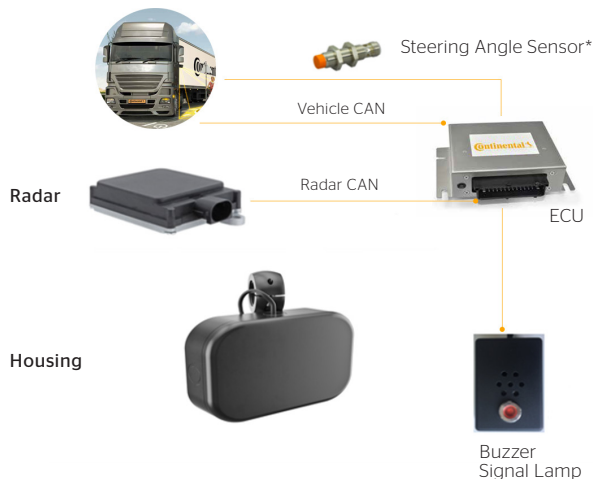

Radar

Steering angle sensor

System Overview

- › The system uses steering angle, vehicle speed and turn signal inputs to activate.
- › Radar, steering angle sensor, control box, signal box, housing, cables and mounting HW included.

Speed Signal	CAN J1939
Control Voltage	12/24 VDC
Plate Mount Kit	P/N 2801602025301
Clamp Mount Kit	P/N 2801602026301
